MILWAUKEE POLICE DEPARTMENT

RESUME OF HOMICIDE

VICTIM:

PALMISANO, August S., W/M [REDACTED] of
1319 N. Jackson # 335, B OF I #96590
Photos and prints on file.

DATE AND TIME OF OFFENSE:

Friday, June 30th, 1978, at 8:50AM.

PLACE OF OFFENSE:

1319 N. Jackson Street, Juneau Village
Garden Apartments (basement garage),
Stall # 33

DISCOVERY OF OFFENSE:

Ruth Ann THORNTON W/F [REDACTED] of 415 E.
Knapp St, # 129, #276-7905

Body Discovered by: M.F.D. Battalion Chief
Thomas KONICKE.

REPORTED BY:

Phone call to Police and Fire Department
made by Ruth Ann THORNTON, W/F [REDACTED]
of 415 E. KNapp St., # 129, #276-7905

REPORTED TO:

District One, Sergeant Otto KETELSON,
also to Fire and Police Department
Dispatchers.

WEATHER CONDITION:

Cloudy and light rain

ELEMENTS OF CRIME:

Some unknown person(s) placed an explosive
device under the hood of the victim 1977
Mercury Sedan, bearing Wisconsin plates
78-K84-442, VIN # 7262S565468, which was
parked in the basement garage stall # 33.
The device apparently exploded when the
victim turned on his ignition switch, and
a fire ensued, causing the death of the
victim.

M 1340 / SEC 10 / PAGE 1

PAGE TWO

a pouch, is clothed in the following very badly burned

The body as is received in the morgue, in

4. A single fragment of a green and black pokadot shirt consisting apparently of a part of the tail of the shirt presumably stuck down in or around the trousers.

5. A pair of jockey type white shorts. In the anterior left part of the waist band there is a hole with some blood around it. This hole measures about 1/4th of an inch horizontally and about 3/8ths inch vertically.

In a pocket of the green trousers as described is a soaked white-cream handkerchief, badly burnt with a tear in the center.

EXTERNAL DESCRIPTION

The body after removal of the clothing is that of an apparently well developed, somewhat slender but not malnourished apparently Caucasian male with extensive injuries to be indicated immediately below.

The injuries including the following: There is extensive blackening with charring about the face, head, singeing off of any hair with some hair remaining posteriorly, charring over the neck with exposure of some of the strap muscles and the anterior edge of the right sternocleidomastoid muscle,

with extensive charring about the right shoulder and

M 1340, SEC 12, PAGE 8

right arm laying bare the biceps and some other muscles as well as most of the muscles on the dorsum of the right hand with multiple fractures involving the metacarpals, particularly the 3rd and the 2nd metacarpals at about the mid-point of the dorsal area, a lesser degree of burning over the left shoulder with a discoloration to a brown with the anterior part of the shoulder down nearer to the nipple with black at the actual shoulder and with a lesser degree of charring with some epidermolysis over the distal 1/2 of the left arm and the entire left forearm, with some epidermolysis over both palms. There is no distinctive pugilistic attitude though the hand on the right is in marked flexion and in mid-flexion on the left. The extensive injuries include further the following. A series of multiple lacerations along with areas of burning with a discoloration to a red-pink over the anterior left chest with partial sparing of a band beginning at about the angle of Lowe involving part of the mid-line, an area to the right and more to the left reaching down about 2 inches beyond the costal margin. There is an area of blackening with charring and skin splitting

in the right flank down to an area about 1
 1/4th inches superior to the anterior superior
 spine of the ilium on the right. In the right
 part of the abdomen there is an elongated area
 of avulsion of skin in an area measuring 5/8ths
 of an inch long and 5/16ths of an inch wide.
 This lies with its superior tip about 4-1/2 inches
 inferior to the inferior margin of the areola of
 that side and at about 2-3/4ths inches from the
 mid-line. Multiple lesser areas of avulsion are
 seen. On the left side of the abdomen there is a
 wound, roughly round, measuring vertically 3/8ths
 of an inch and horizontally 3/8ths of an inch. This
 lies at a distance of 2-1/4th inches to the left
 of the umbilicus and with its superior margin
 at 1-1/2 inches inferior to the inferior margin
 of the umbilicus. Some fat protrudes from this.
 Superficial epidermolysis over the anterior left
 part of the abdomen around this area is seen.
 There is an area of avulsion of skin down
 into the muscle in the right side of the right
 lower quadrant. This is roughly a diagonal, measuring
 1-1/2 inches in diagonal dimension and 7/8ths of an
 inch wide. It lies with its inferior margin

in the mid-line and in the superior part of the
 pubic hair. Extensive charring about the medial
 part of both thighs, particularly on the right,
 with laying bare of the muscles and the medial
 aspect of the thigh is noted. There is also
 extensive charring of the penis and part of
 the scrotum. The injuries are definitely worse
 on the right.

There are extensive areas of further
 epidermolysis over the lateral part of the right
 thigh and the anterior lower one-third of the
 right leg. At the time of the autopsy there
 is very extensive injury to the right leg which
 has been traumatically torn off from the proximal
 part, with the tibial length of about 7-1/4th inches.
 There is a gaping entry wound into the articulation
 of the distal femur and the tibia. Heavily traumatised
 and burnt soft tissue involving both the tibia and
 fibula are seen. The amputated right foot and the
 soft tissue around the ankle and nearby tissue
 was found, identified and brought in with the body.
 There is a simple comminuted fracture of the tibia
 and the fibula at the mid-point between the knee
 and the ankle. Marked deformation at the time
 the body is first seen is noted. Multiple lacerations,

contusions and burns on this are seen. There is a compound comminuted fracture of the distal tibia and fibula at a distance of about 3/4ths of an inch superior to the ankle on the left, with its center lying at about 5-3/4ths inches inferior to the first named fracture on the left as described above. There is an area of avulsion extending down partly into the bone at a distance of 3/4ths of an inch proximal to the ankle. The area of missing soft tissue there measures about 3 X 4 inches, (4 inches in the long axis).

BACK:

There is extensive charring on the back, much worse on the right, with sparing of an area, in a fairly straight line, from about 4 inches from the mid-line out extending down to the waist area. There are likewise extensive burns about the buttocks, considerably worse on the right. There is a lesser degree of burning on the left part of the back. Furthermore the burns on the left part of the flank, though they are a brown-tan, are considerably less than those on the right, as already indicated. There is no evidence of any separate wounds as distinct from the evidences of burn on the back as already described.

EXTERNAL DESCRIPTIVE PROTOCOL

Reference is made to the comments as given

above. The body, apparently identified by finger-

prints and with Detective Louis Bono present of the

Milwaukee Police Department providing evidentiary

escort is that as indicated above. The age is listed

from records from the identification, apparently

made on fingerprint as 49 years. The body as received

in the morgue weighs 166 pounds and measures 71 inches.

It appears facially unrecognizable at the time the

autopsy is started.

At the time the body is initially examined

there are 2 rings on the body. The first is on the

5th finger of the right hand; had a series of apparently

3 large diamond-like stones in a horse-shoe pattern.

The second is on the 4th finger of the left

hand with a central large diamond like stone and

one laterally on each side of the central diamond-like

stone.

INTERNAL EVIDENCES OF INJURY.

The usual modified Y-primary thoraco-abdominal

incision is made.

ABDOMEN:

There are about 300 milliliters of blood in

the abdominal cavity, primarily in the pelvis. There
M 1340, SEC 12, PAGE 12

are 2 holes through the mesenteric border of the small intestine, the more proximal at about 4 feet from the ligament Treitz, the second about 5 inches distal to that. Each is about 1-1/2 inches across. Embedded in the mesentery at about another foot down further along from the ligament of Treitz is a small metallic fragment of metal roughly silver colored; measuring 6 X 5 X between 1 and 2 millimeters. In the pelvis is a wafer-like portion of silver colored metal measuring 12 X 7 X 1 millimeters. This is in a pool of blood. Both fragments are notably distorted. They are saved in a box with the identifying data for appropriate study as indicated. The box is then sealed and my initials are placed across the seal. It is delivered to Detective Bono as indicated previously.

There are lacerations in liver, the deepest being about 4 inches long near the falciform ligament about 3/4ths of an inch to the left of the falciform ligament and having a depth of about 3/4ths of an inch. Smaller lacerations are seen near the dome and the right lobe. There is a laceration about 3/8ths of an inch deep and about 1-1/4th inches long in the superior lateral part

of the spleen. There is likewise a laceration across the anterior part of the left kidney, at the junction of the upper third and the lower 2/3rds. This is about 1-1/2 inches long and is about 5/16ths of an inch deep. There are no other evidences of injury about the abdomen.

INTERNAL EVIDENCES OF INJURY IN THE THORAX:

Injury in the thorax is limited to an

area of contusion around the apex of the heart

measuring about 1 inch X 3/4ths of an inch along

with smaller areas ranging from about 1/4th of an

inch X 1/4th of an inch down to about 1/8th X

1/8th of an inch scattered over the anterior part

of the inferior third of the anterior surface

of the heart, primarily over the septum and to the

right ventricle. No laceration of the heart are

seen. There are no specific evidences of injury

in the lungs.

HEAD:

The usual transbregmatic primary incision

is made. It is noted that there are 4th degree

burns down to the skull, over the vertex of the

calvarium. There are no specific changes in

the galea, calvarium or dura. The brain on

removal is firmer, showing apparently heat coagulation affects. It weighs 1330 grams. It is injected externally but shows no frank hemorrhage. As indicated there is no evidence of epidural, subdural, subarachnoid, intra-parenchymal or intraventricular hemorrhage. The brain is cut in the usual way. Sections are taken across the cerebellum, the medulla, the pons, the level of the anterior putamen, the level of the optic chiasm, the level of the mamillary bodies, the level of the splenium of the corpus callosum, from the mid-point of the basal ganglia, across the occipital tips, and at multiple sites from frontal, temporal, parietal and occipital lobes. No focal changes anywhere are seen. The cortical ribbon has the usual appearance, size and arrangement. The ventricular system is normal without distinguishing changes. The pituitary lies at the usual site and has the usual appearance. The vessels at the base of the brain have the usual pattern. They are not remarkable. Stripping of the dura shows no evidence of skull fracture.

ADDENDUM ON EXTERNAL EVIDENCES OF INJURY:

Fourth degree burns as indicated are

present over the scalp. Second degree are

noted over parts of the right arm, right

forearm, medial aspect of the right thigh

and other areas as indicated above. Second

degree burns obtain over much of the trunk,

the right side of the back, parts of the

right side of the thighs and other sites.

Minimal first degree burns are seen anywhere.

The second degree burns are manifested by

epidermolysis.

INTERNAL DESCRIPTIVE PROTOCOL.

Reference is made to the internal

evidences of injury as indicated above. The

lungs are expanded being a dark red-black. The

right lung weighs 600 grams, the left lung

weighs 480 grams. Cross sections show some frothy

fluid which can be caused to extrude under

pressure.

LUNGS:

There is some carbon down about 1-1/4th

inches below the trachea. None further down

the trachea, none in the bronchi or bronchioles

is grossly recognizable. There is no evidence

of direct flame affect on the trachea, hypo-pharynx or any other tissues. The tracheobronchial, hilar mediastinal nodes are inconspicuous ranging to about 3/8ths of an inch and being grey-cream and dry on cross section. The larynx shows extensive injury down to the muscle as described. Save for some firmness the subcutaneous tissue around the burns there are no other changes. There is no foreign body, no evidence of neoplasm, no evidence of direct injury to the hypopharynx. Blood stained fluid is seen in it. The amount of bleeding is not significant in this area. The esophagus is not remarkable.

HEART:

The heart measures 4-1/4th X 4-1/2 X 2-1/2

inches and weighs 370 grams. Save for the external evidence of injury as described above it is not

remarkable. The heart has the usual 4 chambers, the usual arrangement, the usual relationship to

great vessels and other structures. The left

ventricle ranges to 1/2 an inch, the right ventricle to 1/8th of an inch. The mitral valve measures

3-3/4ths, the tricuspid 4, the pulmonary 2-1/2,

the aortic 2-3/4ths inches. The valvular leaflets are not remarkable. The myocardium is a medium red-brown throughout. The coronary arteries pursue their usual courses. Their walls are soft and pliable, a cream-white, without significant changes save for plaques which narrow the lumen by no more than 20 to 25 percent in the distal part of the left coronary and the first part of the anterior descending branch. No significant occlusion, no thrombosis, no infarction, no fibrosis is seen. The arch of the aorta shows a few cream-yellow plaques but no major number. There is no aneurysm, rupture, direct injury or similar changes.

SPECIMENS:

Specimens one consisting of heart's blood and the other of cavitory blood from the abdomen is obtained at autopsy. Likewise some bile is obtained. Urine cannot be obtained.

VENA CAVA:

The vena cava and its tributaries are not remarkable. The aorta is not remarkable. It is intact. The hemorrhage in the abdomen has been described previously. This apparently issues from the organs as described and from the area of the mesentery.

Likewise injuries to the liver have been described previously. The liver weighs 1720 grams. Save was indicated it is a medium brown and shows no changes. The gallbladder contains about 25 milliliters of medium green viscous bile without calculi. The biliary ductal system is not remarkable.

SPLEEN:

Injuries to the spleen have been described previously. Save for this it is not remarkable. The spleen weighs 90 grams. It is a solid deep dark red. The splenic vessels are intact. They show no changes.

KIDNEYS:

The kidneys lie at the usual site. The injury to the left kidney has been described previously. Save for this the kidneys are not remarkable. They weigh 290 grams put together. The cortices average about 5/16ths of an inch, the parenchyma about 1/2 of an inch. The renal pelvis, ureters, and urinary bladder show no conspicuous changes. The mucosa of the urinary bladder is a cream-white. The ureters are not remarkable. The prostate is a cream-white. It shows no changes. The seminal vesicles in the

body are not remarkable.

M 1340, SEC 12, PAGE 20

TESTES:

Both testes lie in the scrotum. Both show minimal tubular stringing. Neither is remarkable. Neither epididymis is remarkable. There is no enlargement of the abdominal lymph nodes. Harrow is taken from the lumbar vertebrae. It is a medium red without conspicuous changes. The adrenals lie at the usual site and have the usual appearance. The thyroid is a dark brown. It shows no changes. Skin, muscle and bone are kept in the usual way.

GASTROINTESTINAL TRACT:

The gastrointestinal tract is examined from the upper esophagus to the lower rectum. The esophagus, stomach, small intestine and colon are not remarkable save as already indicated in the internal evidences of injury. The pancreas is a firm cream-white. It shows no changes. Multiple sections from all areas are taken for microscopic study. Description of the head has been done under the internal evidences of injury as indicated above.

There is no evidence of any penetration of any metallic or similar fragments into the pre-sacral soft tissue. The metallic fragments, one of which is free in the pelvis, the other in the mesetery have been described previously. There is no evidence of any major intra-thoracic injury.

CAUSE OF DEATH:

Extensive burns, fractures and other injuries resulting from explosion (bomb blast).

15727 West Ryerson Road
New Berlin, Wisconsin

Milwaukee Police Department Case # 2259

Re: Suspect:

Victim: PALMISANO, August Samuel W.M.
Offense: Murder (Explosives) (M1340)
Location: Lower garage, 1319 N. Jackson Street
Date: June 30, 1978, at 8:50 AM

Dear Sir:

The evidence listed on the attached form (Your DJ-LB-129) is being hand delivered by Police Officer Allan Burghardt for examination by your laboratory. This evidence is being submitted in connection with an official investigation of a criminal matter. It has not been, nor will it be, subjected to the same type of technical examination by other experts.

Yours very truly,

HAROLD A. BREIER
Chief of Police

Kenneth Hagopian
Inspector of Detectives

for Coy. D.M.

Examination requested:

Request that fatal evidence (Items A thru C) be examined for residue of any explosives, and if found, to ascertain the type(s). A vial of liquid was obtained from the immediate area of the blast seat (Item D) and should be examined for explosive residue, as the area in question had previously been saturated with water by the Fire Department.

M1340 SLG 13 / PAGE 2

Examination Requested:

Items F and I consist of two alligator clips, suspected to be components of the explosive device used in this crime. Request that these clips, attached wire, and electricians tape be examined for trace evidence.

Request that the low voltage relay switch (Item G), be examined to ascertain if it is an automotive electrical component of a 1977 Mercury automobile. If this proves negative, it is then possible that it may have been a component of the explosive device.

Request that the jacket (Item K) which contains numerous pieces of metal fragments, be examined for trace evidence. This jacket was found about 5' west of the auto and it is unknown at this time whether it belonged to the victim.

Request that the two small metal fragments that were removed from the victim's stomach (Item L), be compared to the known casings of blasting caps to ascertain if that is what they are.

Request that the two pieces of wire (Item J), of light gauge and distinctive color coded insulation, be examined to ascertain if they are leg wires of an electrical blasting cap.

Request that the vial of blood which was obtained during autopsy (Item M) be examined to determine if the victim had ingested any unusual chemical prior to his death.

Statement of Facts:

A high yield explosive device was apparently placed on the engine side of the left upper portion of the fire wall of the victims 1977 Mercury sdn. This explosive device was apparently wired into the ignition system at an unknown point. The subsequent explosion demolished the auto and caused the death of the victim, who was seated in the drivers seat. The blast force generated by this explosion damaged the large overhead door to the west and large metal door located on the east side of this 200' x 60' underground parking garage. Also, other doors on the north and south side of this garage were either damaged or blown out. There was considerable damage to twenty other autos parked in various areas of this garage (see attached sketch), indicating the high yield generated by the explosion of this device.

NOTE: WHEN ITEMS OF EVIDENCE ARE READY TO BE RETURNED, REQUEST DETECTIVE BUREAU BE NOTIFIED.

NOTE: WHEN ITEMS OF EVIDENCE ARE READY TO BE RETURNED, REQUEST DETECTIVE BUREAU BE NOTIFIED.

Money (Item P) found under body of victim when he was removed from auto.

Statement of Facts: Refer to our letter of July 5, 1978.

Examination Requested: Request an examination be made of money (Item P) to determine denominations and value.

Various pieces of physical evidence including pieces of a car, glass, fibers, papers, clothes, wires, etc. (items A, B1 through B5, C, D, E, F, G, H, I, J, K and N) were examined for the presence of any explosive residuals and possible components from an explosive device. Preliminary analysis of the various debris items did not show the presence of any explosive residuals which could be identified. Examination of the debris did not show the presence of many items which could be used to obtain investigative information relating to the nature of the explosive device itself. Items recovered which could be associated with the device were two alligator clips with wires, pieces of a blasting cap, and pieces of possible leg wires. No further investigative information was obtained from these items. No analysis was performed on the body bag (item O). No further analysis on any of the above items is anticipated.

Regarding :

Murder of August Palmisano

Wanted for :

Information On Friday, June 30, 1978, I received a call from Todd Russell informing

me that he has some information on the murder which occurred today of August Palmisano. He went on to state that he had originally contact the CIA and they referred him to the FBI which referred him to the Houston PD. He stated that his life might be in danger. He requested that I contact Houston police and have them interview him at his home. I stated that I would do so and this terminated our conversation.

RE: Our Claim Number: 504642-7
D/L: 6/30/78

Gentlemen:

On June 30, 1978 at the Juneau Village Garden Apartments,
1319 North Jackson Street, our insured's vehicle was damaged
by a bomb blast.

Our insured is Susan M. Selwick, 3887 Bay Shore Drive,
Sturgeon Bay, Wisconsin. Her vehicle is a 1974 Ford
Mustang.

We have made payment to our insured in the amount of
\$191.88 for damages her vehicle suffered. We are subrogated
to the rights of recovery for this amount. If the responsible
person is apprehended or arrested, please notify us immediately.

Sincerely,

Richard Rosenthal
